SUMMARY

Full-Stack Developer specializing in secure MERN applications and production-ready systems. Experienced in building scalable APIs, real-time dashboards, and cross-platform desktop apps with a strong focus on security and performance.

EXPERIENCE

IT Assistant / Cyber Café Operator **Blida, Algeria | ~2 Months**

- Provided technical support including software installation and troubleshooting
- Managed multiple systems, printers, and peripheral devices
- Assisted customers with internet services, document processing, and digital tools
- Handled daily operations including system monitoring and payments

PROJECTS

Full-Stack E-Commerce Platform — MERN Stack:

- **Live App:** https://shops-frontend.vercel.app
- Built production-grade e-commerce platform covering full user lifecycle (guest → admin)
- Implemented secure JWT authentication with HttpOnly cookies and CSRF protection
- Designed multi-layer file upload security (MIME, extension, sanitization, ClamAV scanning)
- Prevented NoSQL injection using request sanitization middleware
- Developed admin dashboard with analytics and exportable reports
- Integrated PayPal SDK for secure, PCI-compliant payments
- Optimized data fetching using RTK Query with cache invalidation
- Designed scalable MongoDB schemas for users, orders, and products
- Deployed full-stack application using Vercel (frontend) and Render (backend) with MongoDB Atlas

Product Manager:

- **Live App:** https://product-manager-chi-eosin.vercel.app
- **Built a high-performance inventory system** that syncs in real-time, allowing businesses to manage products across both web and desktop versions simultaneously.
- **Developed a "Safety Net" recovery system** that stores deleted items for 30 days, preventing accidental data loss and allowing for one-click restoration of entire categories.
- **Enhanced user experience** by adding automated PDF report generation and a drag-and-drop image system for easier product cataloging.
- **Focused on quality and stability** by writing a massive suite of tests to catch bugs before they ever reach the user.

EDUCATION

Master of Science in Software Engineering (In Progress) 2024 – Present

University of Saad Dahleb – Blida, Algeria

- Relevant coursework: Software Architecture, Advanced Development Methodologies, Project Design

Bachelor of Science in Computer Systems 2020 – 2024

University of Saad Dahleb – Blida, Algeria

- Final Year Project: Lawyer-client management platform using Firebase (backend) and Android Studio / Java (mobile)
- Features: real-time database sync, user authentication, appointment & case management

Scientific Baccalaureate — Bien (Above Average) 2021

Houari Mahfoud High School – Blida, Algeria

- Specialization: Experimental Sciences

TECHNICAL SKILLS

Frontend: React, Next.js 14, TypeScript, Tailwind CSS, Redux Toolkit / RTK Query, Headless UI, Framer Motion, Syncfusion EJ2

Backend: Node.js, Express.js, REST API Design, JWT Authentication, bcrypt, Multer, Rate Limiting, File Upload Validation, express-mongo-sanitize

Database: MongoDB Atlas, MongoDB Compass, Turso (cloud SQLite), Firebase

DevOps: Vercel, Render, GitHub Pages, GitHub Actions, Tauri (desktop), Cloudinary

Testing: Vitest, React Testing Library, Playwright (E2E), node:test, Postman (API testing)

Tools: Git & GitHub, Figma, ApexCharts, PayPal SDK

OS & Scripting: Linux (Debian), Bash scripting, WSL, VirtualBox/VMware, Vim, Ollama (local AI)

Other: UML Diagrams (Use Case, Class, Activity, State Machine, Sequence), Agile, Clean Architecture, MVC Pattern

Languages: Arabic (Native), English (Intermediate), French (Intermediate)
